Hummingbird Feeders

Above photos taken by a First Nature® customer - Texas

The bright red color attracts the most inquisitive hummingbirds. With easy-to-fill wide-mouth jar reservoirs and two-part bases, First Nature® Hummingbird Feeders are the easiest feeder on the market to clean - with just warm soapy water.

The feeding ports will accommodate several hummer's at a time. With First Nature® Hummingbird Nectar Concentrate, you can mix the correct proportions right in the feeder jar.

Easy to clean patented two-part base

Premium Hummingbird Nectar Concentrate

A special solution of the perfect hummingbird sugars. Easy to use. Just add to water and it really draws the birds! Simply amazing results! First Nature® Nectar is a premium concentrate that ends the mess of feeding hummingbirds. No granulated sugars to mix, no boiling water, no sticky cleanup. Just mix one part First Nature® Concentrate to three parts water. The 16 oz. concentrate bottle makes a half gallon of nectar. The 32 oz. concentrate bottle makes a full gallon of nectar.

Scientific studies have repeatedly shown that hummingbirds prefer sucrose to the monosacharides glucose or fructose. Knowing this, First Nature® Nectar uses the finest food-grade sucrose and not less effective invert sugars found in other products.

Not only is First Nature® Nectar the easiest hummingbird food to use, it's also the most healthy choice for these colorful visitors. You will be astounded at how hummingbirds respond!

Special Note:

Just like flower nectar, our First Nature Nectar undergoes a slow natural inversion of the disaccharide sugar which makes it even more appealing to hummingbirds.
